

MAHMOUD ABDUALGHANI MOHAMMED ALMAGRAMI

PostgreSQL Database Administrator | High Availability, Performance & DevOps

Sana'a, Yemen | +967781830031 | mahmoudalmagrami@gmail.com

PROFESSIONAL SUMMARY

Database Administrator and Database Engineer with hands-on experience managing production data infrastructure across environments spanning up to nine servers. Specialized in PostgreSQL high availability, replication, backup and recovery, performance tuning, access control, and observability. Experienced in automating infrastructure operations and supporting DevOps workflows with Ansible, Pigsty, Docker, GitLab CI/CD, Prometheus, and Grafana.

CORE TECHNICAL SKILLS

Databases & Storage: PostgreSQL, Redis, MinIO

PostgreSQL Operations: High Availability, replication, backup and restore, automated backups, PITR, disaster-recovery testing, performance tuning, health checks, roles, permissions, and access control

HA & Networking: Pigsty, Patroni, etcd, HAProxy, Virtual IP (VIP)

Observability: Prometheus, Grafana, infrastructure and database metrics

DevOps & Systems: Ansible, Docker, GitLab CI/CD, Linux, Windows Server, VMware, Bash, PowerShell

Additional Technologies: Strapi, React (Intermediate)

PROFESSIONAL EXPERIENCE

Database Administrator / Database Engineer

December 2023 – Present

Sofa Digital Solutions | Sana'a, Yemen

- Manage production database and data-service infrastructure across environments spanning up to nine servers.
- Implemented and currently operate PostgreSQL high-availability and replication environments using Pigsty, Patroni, etcd, and HAProxy/VIP.
- Manage automated and scheduled backups, restore procedures, Point-in-Time Recovery (PITR), and disaster-recovery testing.
- Perform PostgreSQL performance tuning, health checks, troubleshooting, capacity planning, and proactive monitoring.
- Administer database users, roles, permissions, and access controls across production systems.
- Build and maintain database and infrastructure observability using Prometheus and Grafana.
- Automate configuration and database infrastructure operations with Ansible and Pigsty, while supporting Docker and GitLab CI/CD workflows.
- Serve as the primary owner of day-to-day database operations within a small team and previously supervised two team members.
